		pelos		2 rd / 3 rd Semester				
e aim of t	Lectures / week		Dr Panagiotis Theodosis-Nompelos					
e aim of t		3	Laboratories/week	2				
The aim of this subject is the study of important inorganic compounds that are used in Pharmacy or have toxicological or are of special pharmaceutical interest. Another aim is the study of the periodic system of elements in relation to their chemical, biologic and toxicological properties. Further aims are the acquisition of knowledge on the role of various metals in the organism, such as trace elements, as well as the role of heavy metals as constituents of chemicals and drugs. The study of synthesis, properties and actions of a number of metal ligands and their role as drugs or antidotes is also one of the main aims of this course.								
or antidotes is also one of the

	Part 5 Metal poisons and their treatment Organic ligands - metal poisoning antidotes, BAL diferiprone, desferoxamine.	., EDTA, penicilla	amine,		
Prerequisites	PHA106	Corequisites	None		
Course Content	Theory:				
	Bioorganic (Medicinal) Chemistry - Role of inorganic elements in cell				
	- organism				
	Inorganic Pharmaceutical Chemistry, Inorganic Pharmaceuticals				
	as Therapeutic Agents.				
	Quantitative analysis – purity analysis of				
	substances. Uses - Applications - Doses.				
	Mechanisms of action of inorganic drugs				
	Pharmaceutical Chemistry of Alkali				
	Pharmaceutical Chemistry of Alkaline Soils				
	Pharmaceutical chemistry of barium and				
	aluminum Pharmaceutical Chemistry of Silicon				
	and Carbon Pharmaceutical Chemistry of				
	Nitrogen Compounds				
	Pharmaceutical Chemistry of phosphorus, arseni	ic, antimony,			
	bismuth Pharmaceutical Chemistry of oxygen, su	Ilfur and seleniu	m		
	Pharmaceutical Chemistry of Halogens: Fluorine	, Chlorine, Brom	ine,		
	Iodine Pharmaceutical Chemistry of Copper, Silv	er, Mercury			
	Pharmaceutical Chemistry of				
	Titanium Pharmaceutical Chemistry				
	of Helium				
	Pharmaceutical Chemistry of minerals such as a	luminum, magne	esium,		
	silicon				
	Metal poisons and their treatment				
	Organic ligands - metal poisoning antidotes, BAL	., EDTA, penicilla	amine,		
	diferiprone, desferoxamine.				
	Laboratory experiments/exercises: As part of the course, laboratory exercises are material for a better deepening and consolidat Indicative exercises are the following: 1. Preparation of boric acid 2. Quantity and purity analysis of borax 3. Quality and quantity analysis of copper sulpha 4. Quantity analysis of magnesium sulfate 5. Quality and quantity analysis of iron sulphate-I 6. Preparation and structure analysis of cooper (I	ion of the theor te I	etical part.

	 7. Determination of nickel (II) EDTA complex stoichiometry 8. Preparation of cis and trans Pt (II) complexes 9. Quality and quantity analysis of phenolic compounds after their complexation with Fe (III)
Teaching Methodology	Teaching methodology includes lectures, case studies and problem solving tutorials- to offer the theoretical background, and laboratory exercises in order to better understand the concepts of Pharmaceutical Chemistry. PowerPoint is used during lectures. Tutorials and case studies are also included. Methods such as discussion, questions/answers, pros/cons, brainstorming and debates are used to enhance student's participation. Recent research findings are presented in the course content. The laboratory part of the course is conducted in the Pharmaceutical Lab with the appropriate laboratory equipment and under the supervision of the lab instructor. Appropriate preparation and demonstration by the laboratory supervisor precedes each laboratory exercise. Assessment of laboratory includes the submission of laboratory report at the end of each lab exercise by each student.

Assessment	Mid Term Exam 30% Lab Reports/Examination 20% Final Examination 50%
	 Course evaluation is based on the following: (a) a written examination during the semester which examines specific modules of the course and it accounts for 30% of the total grade (b) laboratory reports, in which students present the collected and analysed experimental data as well as their conclusions, derived from theory and the experimental data. (c) a final written examination which examines all modules of the course material and it accounts for 50% of the total grade. Students are prepared for the above written exams over the theoretical and practical background in the classroom and with additional exercises given to them for further practice. For the better comprehension of the subject frequent revisions are performed at regular intervals.
	Questions of gradual difficulty apply to the evaluation of the mid-term and

ΔΙΠΑΕ ΦΟΡΕΑΣ ΔΙΑΣΦΑΛΙΣΗΣ ΚΑΙ ΠΙΣΤΟΠΟΙΗΣΗΣ ΤΗΣ ΠΟΙΟΤΗΤΑΣ ΤΗΣ ΑΝΩΤΕΡΗΣ ΕΚΠΑΙΔΕΥΣΗΣ CYQAA THE CYPRUS AGENCY OF QUALITY ASSURANCE AND ACCREDITATION IN HIGHER EDUCATION

	justification of the answers or issue analysis and problem solving questions may be applied in order to evaluate the knowledge and perception of the student on the subject. For the evaluation of laboratory exercise reports, the following criteria shall
	be taken into account, with ratios varying according to the laboratory exercise: (a) data collection (b) data analysis
	(c) application of theory to draw conclusions
	The above criteria and assessment tools, as well as their weight, are communicated to the students, and are formulated in such a way in order to maximize the expected learning outcomes as well as the quality of the course.
