Course Title	Pharmacology II		
Course Code	PHA405		
Course Type	Compulsory		
Level	BSc (Level 1) / MPharm (Level 2)		
Year / Semester	4th / 7th		
Teacher's Name	Dr P. Theodosis-Nompelos, Dr N. Drakoulis		
ECTS	6 Lectures / week 3 Laboratories/week 2		
Course Purpose	The purpose of this course is to teach the students the biological, pharmacological and therapeutic effects and usage of drugs. Also, to provide the proper knowledge for the therapeutic application of the drugs concerned. These drugs are mainly directed to the cardiovascular and central nervous systems. Aim is also to study in detail the action of drugs for the treatment of psychic disorders, e.g. antianxiety, neuroleptic and antidepressants drugs and agents against ageing and neurodegenerative conditions. The study of psychotoxic agents, like tetrahydrocannabinol, lysergic acid diethylamide and mescaline, is among the aims of the course, as well as the study of cocaine and other local anaesthetics. Finally, the study of the discovery and establishment of experimental models for various CNS disorders is one of the aims of this course.		
Learning Outcomes	By the end of this course, the students are expected to be able to: Module 1: Cardiovascular system Describe the Anatomy and Physiology of the Cardiovascular System. Analyze the diseases of arrhythmia, arterial hypertension, angina, acute myocardial infarction and heart failure. Describe dyslipidemia as a disease entity.		
	 Module 2: Medications that act on the cardiovascular system Explain the pharmacokinetics, mechanism of action, efficacy, side effects, contraindications, toxicity and interactions of drugs that act on the cardiovascular system. Analyze the therapeutic efficacy of cardiological drugs. Module 3: Nervous system Determine the Anatomy and Physiology of the central and peripheral nervous system. Evaluate the function of neurons, the neuronal transmission and the role of 		

	ΔΙΑΣΦΑΛΙΣΗΣ ΚΑΙ ΠΙΣΤΟΠΟΙΗΣΗΣ ΤΗΣ ΠΟΙΟΤΗΤΑΣ ΤΗΣ ΑΝΩΤΕΡΗΣ ΕΚΠΑΙΔΕΥΣ S AGENCY OF QUALITY ASSURANCE AND ACCREDITATION IN HIGHER EDUCA				
	neurotransmitters in the nervous system.	X			
	Get acquainted with neurodegenerative brain diseases such as				
	Parkinson's disease and Alzheimer's senile dementia. Describe the epilepsy entity. Understand the concepts of insomnia, migraine and pain in general Become familiar with the concepts of anxiety, mania and				
	depression				
	Module 4: Medications that affect the nervous system				
	Summarize the pharmacokinetics, mechanism of ac	of action, efficacy, side			
	effects, contraindications, toxicity and interactions of drugs acting on the nervous system. Describe the therapeutic utility of neurological drugs as well as those				
	used in psychiatric illnesses.				
	Develop the action of sedatives and stimulants of the central				
	nervous system.				
		Describe analgesics as well as neuroleptics - sedatives, as well			
	as psychotoxic agents				
		as psycholoxic agenis			
	Module 5: Drugs that affect the endocrine system	Module 5: Drugs that affect the endocrine system			
	Recall the basic principles of the endocrine system (pituitary gland,				
	thyroid, adrenal glands)				
		Analyze vitamins, hormones and drugs that are associated with endocrine disorders.			
	Describe the drugs for obesity.				
Prerequisites		Corequisites	None		
•		•			
Course Content	Anatomy of cardiovascular				
	system Cardiovascular				
	physiology.				
	Cardiovascular diseases: arterial hypertension, ischemic heart				
	disease, heart failure, arrhythmias.				
	Cardiovascular disease drugs.				
	Nervous system anatomy, central and peripheral.				
	Central and peripheral nervous system	n physiolog	gy, CNS		
	neurotransmission. Nervous system diseases: epilepsy, neurodeger diseases and aging, and pharmaceutical treatment of these disease				
	Medicines used in psychiatric diseases such as mar	nia, anxiety, d	lepression.		

	×
	Antidepressants, antidepressants (serotonin reuptake inhibitors,
	monoamine oxidase inhibitors).
	Psychotoxic agents, stimulants, tetrahydrocannabinols, cannabis,
	LSD, cocaine.
	Neuroleptic - sedative drugs, anesthetics, hypnotics.
	Opioid analgesics. Centrally acting antitussive
	drugs. Local anesthetics.
	Endocrine system, pituitary, thyroid, adrenal glands
	Vitamins, hormones and medications for related endocrine
	disorders. Medications for obesity.
	Laboratory experiments/exercises and case studies: As part of the course, laboratory exercises are carried out on the course material for a better understanding of the theoretical part, aiming at a better understanding of the mechanism of action, the pharmacological actions, the interactions and adverse reactions of drugs. Clinical case studies and analysis of data from research articles are also included.
	Clinical case studies Hypertension and diuretics Heart failure Diabetes and hyperlipidaemia Neurodegenerative diseases Mental Disorders Epilepsy Drug addiction
	Exercises
	Exercise 1: In silico study of the potential pharmacological properties and actions of compounds of pharmaceutical interest
	Exercise 2: Determination of the mechanism of action of diuretics based on the urine volume, pH and the concentration of the urinary solutes
	Exercise 3: Tyloxapol induced hyprlipidaemia, quantification of LDL, total cholesterol and triglycerides, and determination of the hypolipidaemic activity of known hypolipidaemic agents.
	Exercise 4: Streptozotocin induced diabetes and quantification of blood glucose and CRP levels. Determination of the activity of anti-diabetic drugs
	Exercise 5: Determination of the acetyl-cholinesterase inhibitory potency of Physostigmine.
Teaching Methodology	Teaching methodology includes lectures on theoretical background, and exercises to better apprehend the basic concepts of Pharmacology. The lecturer uses PowerPoint presentations with detailed notes in order to help students better understand theory. Methods such as discussion, questions/answers, pros/cons, brainstorming, debates, and cooperative

	×
	group-based learning and peer-feedback methods will also be implemented. The students have the opportunity to work in teams and discuss their findings with the professor. Recent research results are included and discussed in the course. The laboratory part is conducted in a Pharmaceutical lab with computer support, supervised by the lab instructor/professor. Appropriate preparation and demonstration by the laboratory supervisor precedes each exercise. Assessment of laboratory exercises is done based on laboratory reports submitted by each student at the end of each lab exercise.

Assessment	Mid Term Exam 30% Lab Reports and case study analysis 20% Final Examination 50% Course evaluation is done by:
	 (a) a written examination during the semester which examines specific modules of the course and it accounts for 30% of the total grade (b) laboratory reports during the semester, in which students present the collected and analysed experimental data as well as their conclusions, derived from theory and the experimental data, and together with case studies analysis account for 20% of the total score (c) a final written examination which examines all modules of the course material and it accounts for 50% of the total grade. Students are prepared for the above written exams over the theoretical and practical background in the classroom and with additional exercises given to them for further practice at home. For the better comprehension of the subject frequent revisions are performed at regular intervals.
	Questions of gradual difficulty apply to the evaluation of the mid-term and final examination. There may be multiple choice or right/wrong questions with justification of the answers or issue analysis and problem solving questions may be applied in order to evaluate the knowledge and perception of the student on the subject. For the evaluation of laboratory exercise reports, the following criteria shall be taken into account, with ratios varying according to the laboratory
	exercise: (a) data collection (b) data analysis

ΔΙΠΑΕ ΦΟΡΕΑΣ ΔΙΑΣΦΑΛΙΣΗΣ ΚΑΙ ΠΙΣΤΟΠΟΙΗΣΗΣ ΤΗΣ ΠΟΙΟΤΗΤΑΣ ΤΗΣ ΑΝΩΤΕΡΗΣ ΕΚΠΑΙΔΕΥΣΗΣ CYQAA THE CYPRUS AGENCY OF QUALITY ASSURANCE AND ACCREDITATION IN HIGHER EDUCATION

	The above criteria and assessment tools, as well as their weight, are communicated to the students, and are formulated in such a way in order to maximize the expected learning outcomes as well as the quality of the course.
