

CE570 - Structural Assessment and Retrofit

Course Title	Structural Assessment and Retrofit				
Course Code	CE570				
Course Type	Technical Elective				
Level	MSc (Level 2)				
Year / Semester	1 st or 2 nd Year / 2 nd or 3 rd Semester				
Teacher's Name	Dr. Petros Christou				
ECTS	7	Lectures / week	3	Laboratories / week	
Course Purpose	<p>The course aims to present the underlying concepts structural assessment and damage identification of existing structures and also present alternatives for the repair and strengthening of structures according to the current legislation and practice. The students will be presented with the principles and concepts of modern design codes appropriate for different repair or strengthening methods and gain an understanding of the performance based design. The students will become familiar with the methods for the structural assessment of existing structures, identify available materials and methods for repair and strengthening and propose alternative repair schemes for the same structure.</p>				
Learning Outcomes	<ol style="list-style-type: none"> 1. Use state of the art software to assess the performance of existing structures; 2. Apply the code provisions to assess the capacity of existing structures; 3. Propose alternative repair schemes for the same structure; 4. Assess the structural capacity of the structure after the application of the strengthening technique. 				
Prerequisites		Co-requisites			
Course Content	<ol style="list-style-type: none"> 1. Damage identification and structural performance; 2. Legislation Framework; 3. Introduction to Nonlinear Analysis (material, geometric); 4. Introduction to risk assessment and fragility analysis; 5. Performance assessment of existing structures; 6. Repair and Strengthening techniques. 				
Teaching Methodology	<p>The course will be presented through theoretical lectures in class. The lectures will present to the student the course content and allow for questions. Part of the material will be presented using visual aids. The aim is to familiarize the student with the different and faster pace of presentation and also allow the instructor to present related material (photographs etc.) that would otherwise be very difficult to do. The learning process will be enhanced with the requirement from the student to solve exercises. These include self-evaluation exercises which will be solved in class. These exercises will not be graded. Exercises will also be given as homework which will be part of their</p>				

	<p>assessment. Besides from the notes taken by students in class, all of the course material will be made available through the class website and also through the eLearning platform. Finally the instructor will be available to students during office hours or by appointment in order to provide any necessary tutoring.</p>

Assessment	<p>The course is assessed through mid-term examinations, assignments and a final examination. The criteria for assessment can be found on the individual assignments and exams. The weights of the course assessment are as follows:</p> <table data-bbox="491 1088 1013 1223"> <tr> <td>Midterm Exams</td> <td>30%</td> </tr> <tr> <td>Assignments</td> <td>20%</td> </tr> <tr> <td>Final Exam</td> <td>50%</td> </tr> </table>	Midterm Exams	30%	Assignments	20%	Final Exam	50%
Midterm Exams	30%						
Assignments	20%						
Final Exam	50%						
Language	English
